Chalisa Langchai

Bangkok, Thailand | chalisa4824@gmail.com | github.com/chal-48

SUMMARY

Fourth-year Electronic Engineering Technology (Computer) student at King Mongkut's University of Technology North Bangkok, with an interest in full-stack software development, particularly backend systems, APIs, and databases. Academic project experience spans web applications, mobile applications, and embedded systems. Focused on learning through hands-on development, solving problems systematically, and building the skills to take on new technical challenges.

EDUCATION

Bachelor of Engineering in Electronic Engineering Technology (Computer) 2023 - Expected 2027

King Mongkut's University of Technology North Bangkok
GPA: 3.24/4.00

Relevant Coursework: Web Application Development, Database & Data Technology, Data Structures & Algorithms, Software Engineering, Linux OS & Administration, Cloud Computing (Azure), Computer Networks

TECHNICAL SKILLS

Programming: Python, JavaScript, Dart, SQL, PHP, C / C++
Web & Applications: HTML, CSS, Node.js, Express, FastAPI, Flutter, React
Data & Tools: PostgreSQL, MySQL, Cloud Firestore, Firebase, Supabase, Git, GitHub, Linux
Embedded Systems: Raspberry Pi, ROS 2, Arduino, Sensor Interfacing

ACADEMIC PROJECTS

VanVan — Van Booking Web Application

Source · Live Demo

JavaScript · Node.js · Express · PostgreSQL · Supabase | 2026

- Developed web and API workflows for schedule browsing, seat reservations, payment-slip uploads, and administrative booking verification.
- Used PostgreSQL transactions and row locks for seat availability, JWT and bcrypt for accounts, and Supabase Storage for payment slips.

Music App — Music Discovery & Playlists

Source

Flutter · Dart · Firebase · Cloud Firestore · Provider | 2026

- Built music-search and audio-preview interfaces using the iTunes Search API, with Provider to share playback state across screens.
- Integrated Firebase Authentication for user accounts and Cloud Firestore for personal playlists and song collections.

Autonomous Agricultural Spraying Boat — Senior Project (In Progress)

Source

Python · Raspberry Pi · ROS 2 · FastAPI · WebSocket | 2026

- Developing mission-route and state APIs with FastAPI and publishing boat-state updates over WebSocket every second.
- Developing a ROS 2 LiDAR-processing node and GPS, AS5600, and PWM test scripts; navigation and control components are not yet integrated end to end.
